

M088 AIR ENTRAINMENT METER

EN 113-2, 459-2; DIN 18555

Used for the determination of the air content in mortar.

This instrument directly supplies the rate of air contained in the form of bubbles in mortar. The mix is subjected to a pressure that is twice that of the atmosphere, so that the volume of mortar which is incompressible remains unchanged, while the volume of air is reduced to the half. Made from light alloy and it is supplied calibrated, complete with tamping rod and hand pump.

Volume: 1 litre
Dimensions: 240x540 mm
weight: 9 kg

Fully supplied with:

- Manual pump.
- Instruction manual.
- LBG calibration certify.

The accessories to effect all the tests have to be ordered separately.
